Northwest Fire Potential Summary:

Dry southwesterly flow aloft expected to be over the region today as high pressure begins to rebuild from the south. There is just a chance of a little light IA activity today in extreme SE Oregon from a very marginal thunderstorm threat near the Oregon/Nevada border. Otherwise we just wait for a return to hotter and drier weather as we progress through the week. Burning conditions will be elevating again as we get into mid-week from a combination of the hot, dry and unstable weather. Next potential for significant lightning does not seem likely before next weekend.
